The Convergence of Sleep Science and Sleep Comfort

The BioPosture™ Mattress is the next generation in sleep comfort. It combines the science of healthy sleep using patented Celliant® fabric outside with the unmatched comfort, body conformity and ergonomic support of BioPosture open cell BioMemoryFoam™ inside.

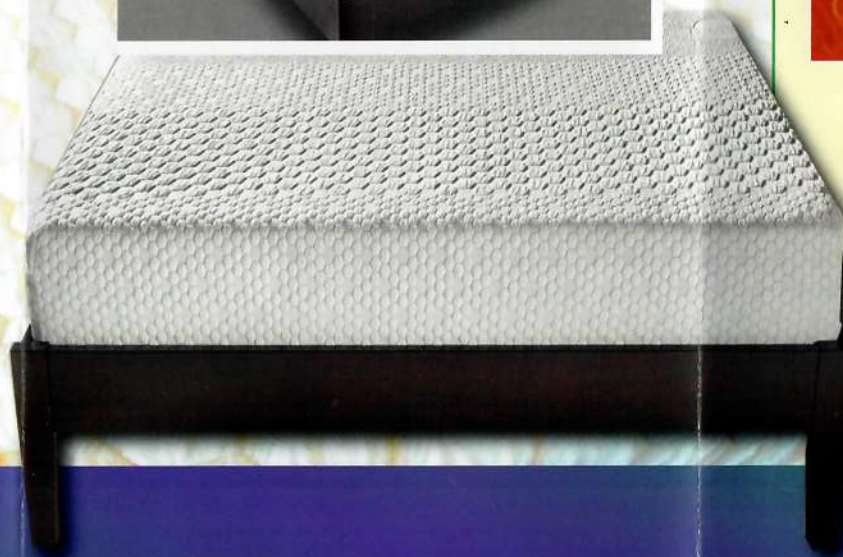

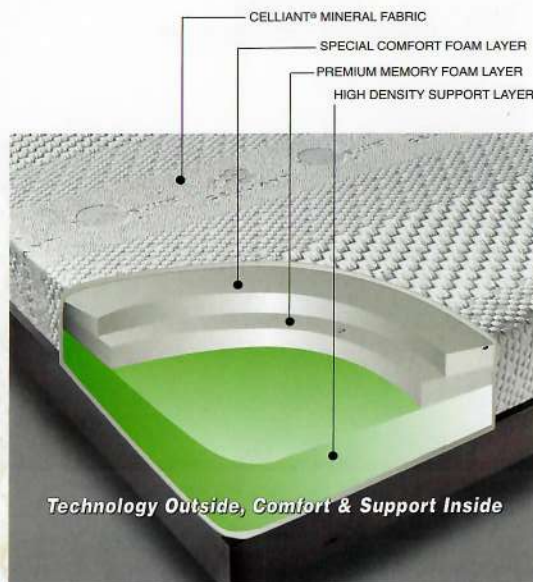

The patented, clinically tested Celliant® fabric we use is made from 13 optically-responsive minerals that harness the body's heat and recycle it back as beneficial infrared (IR) energy. Importantly, BioPosture products with Celliant®, have been Determined To Be Medical Devices and General Wellness Products By The FDA.

The clinical research has shown that Celliant's FDA Determined Infrared Yarn Technology:

- Penetrates into the muscle and tissue to promote a temporary increase in local blood flow.
- Supports faster/quicker recovery.
- Supports increase energy. Increases strength and performance.
- Helps increase comfort and promotes restful sleep.

IMPORTANT

As an American made-on-order, hand-crafted product, each BioPosture™ Mattress can be produced for non-smokers, without the chemical laden, federally-mandated fire retardant when your doctor provides a Letter of Medical Necessity.

HOW CELLIANT® WORKS

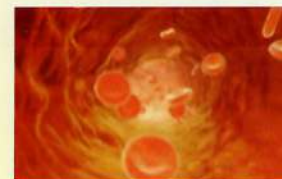

Natural mineral Celliant® fibers are imbedded into the mattress fabric.

Fibers absorb the body's energy and convert it to a usable form, then recycle it back into the body.

Recycled energy triggers a natural chemical reaction within the body.

The reaction results in increased blood flow and oxygenation to body tissue.
